Change history			
Changed on:	**Version**	**Changed by:**	**Description of document change:**
2022-01-12	2.48 System version ZSMOPL: 1.27.0	CeZ	Adding a new warning TRZB8 – " The shortage report quantity limit for the product has been exceeded"
2022-03-21	2.49 System version ZSMOPL 1.27.1	CeZ	Adding the TROSPOZ44 validation for the STN transaction if it includes the transaction item without stocks. Improving the validation of TROSPOZ83 - differentiation of the product series Improving the validation of TROSPOZ85 - differentiation of the product series Disable TROSPOZ75 validation for STN transactions
2022.04.11	2.50 System version ZSMOPL 1.28.0	CeZ	Adding the TROS59 validation – The source document number was not specified Adding the TROS60 validation – The healthcare facility indicated in the transaction as the entity of the other party currently in the Register of Entities Performing Medicinal Activities does not have the status of "Active" The content of the message for TRZB2 has been changed to "The number of no product has been given with a value less than or equal to zero"
2022.08.24	2.51	CeZ	Adding the planned delivery location for the message in the Delivery planning message.

Change history			3 Z 66
Changed on:	**Version**	**Changed by:**	**Description of document change:**
	System version ZSMOPL 1.29.0		Adding new errors and warnings: • TRPD14 (Error) • TRPDPLAN9 (Error) • TRPDPLAN10 (Error) • TRPDPLAN14 (Error) • TRPDPLAN15 (Error) • TRPDPLAN16 (Error) • TRPDPLAN17 (Error) • TRPDPLAN18 (Warning) • TRPDPLAN19 (Warning) • TRPDPLAN20 (Warning) Delete error TRPD5
2022.11.09	System version ZSMOPL 1.29.1		Adding new errors and warnings: • TROS61 (Error)
2022.12.05	System version ZSMOPL 1.29.2	CeZ	Adding new errors and warnings: • TRPDPLAN21 (Error)
2023.03.27	System version ZSMOPL 1.30	CeZ	Expanding the message about turnovers and statuses with the approval number of the president of the URPL. New errors and warnings: • TROSPOZ86 < numerZgodyPrezesa > - The approval number of the president of the URPL was not found in the registry of monitored products.
2023.12.04	System version ZSMOPL 1.33	CeZ	• Added a new warning TROS62 - Invalid transaction type. To report inventory, use the INW - inventory transaction • The INW transaction replaces the IR+ and IR- transactions • Changes in the scope of integration with registers (without affecting the end user of the portal and integrators)

Change history			4 Z 66
Changed on:	**Version**	**Changed by:**	**Description of document change:**
2024.02.19	System version ZSMOPL 1.33.1	CeZ	New errors and warnings: • TROSPOZ86 (Warning) • TROSPOZ87 (Error) • TROSPOZ88 (Warning) • TROSPOZ89 (Warning) • TROSPOZ90 (Error) • TRPDPLAN22 (Error)
2024.04.14	System version ZSMOPL 1.33.2	CeZ	New errors and warnings: • TROZPOZ91 (Warning) Modification of errors and warnings: • TROSPOZ75 (Error) • TROSPOZ71 (Error) • TROSPOZ78 (Error) Changed error content for KM1 validation
2024.07.11	System version ZSMOPL 1.33.2	CeZ	Modification of errors and warnings: • The STN transaction will not cause the TROSPOZ78 error if it is associated with WUT, WZR, PZR, PRO transactions and inventory transactions with zero inventory levels INW, IR-, IR+ • The PRO transaction for an expired product will not trigger the TROSPOZ78 error
2024.07.31	Wersja systemu ZSMOPL 1.33.3	CeZ	Modification of validation rules for messages: • The MWO transaction for an expired product will not trigger the TROSPOZ78 error. • Extend the expiration date period to 5 years for validation TROSPOZ81.
2024.10.10	Wersja systemu ZSMOPL 1.35	CeZ	Modification of validation rules for messages: • TROSPOZ83 – change in validation, • TROSPOZ85 – change in validation and conversion of a warning into an error, • TROSPOZ78 – unification of validation and addition of new transactions allowing transactions with an expired batch.

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

1. Introduction

This document contains the description of information structure of the ZSMOPL messages. The document was drawn-up for the purposes of developers of software sending data to the ZSMOPL system in effect of detailed analysis carried out by the system contractor in Procurement no. 3 to the Contract No. CSIOZ/121/2014.

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

2. Glossary of terms

Types of entities reporting the trade in monitored products. The classification below is used at the stage or registration of a business entity in the ZSMOPL. When a specific business entity is displayed in two categories e.g. healthcare entity running and entity managing public pharmacy, it should be registered as two separate reporting entities – one of them as a AP-type entity and the second one as PW (in compliance with the description entered in the table below).

Symbol	Description	Reporting obligation
AP	A business entity running retail pharmacies, dispensaries, company's pharmacies, other outside PA and PF categories, within its structure.	Trade and stock message. Shortage report message.
HU	A business entity running pharmaceutical wholesales within its structure.	Trade and stock message.
PW	An entity conducting healthcare activity	Trade and stock message. Shortage report message.
PO	Marketing authorisation holder.	Trade and stock message. Delivery planning message.

Types of places of business of the reporting entity.

Symbol	Description
MPDAP	A pharmacy holding its ID in the Register of Pharmacies.
MPDHU	A pharmaceutical wholesale holding its ID in the Register of Pharmaceutical Wholesales.

Connections between entities and places of business

Type of reporting entity	idBiznesowy of reporting entity	Type of reporting entity	idBiznesowyMPD of reporting entity	RodzajMPD of reporting entity
Marketing authorization holder, importer, producer	NIP or VATIN	PO	is not filled	is not filled
Medical entity	Number in RPWDL	PW	Pharmacy ID	MPDAP
Generally accessible pharmacy	REGON	AP	Pharmacy ID	MPDAP
Pharmaceutical wholesaler	REGON	HU	Wholesaler ID	MPDHU

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

Types of entities with which the transaction of trade in medicinal products is made. The following table indicates symbols and terms that are not classification of reporting entities however refer to classification of the other trading party in relation to the reporting entities.

Symbol	Descriptions
AP	An entity running a pharmacy (public, pharmacy point).
FP	Polish business entity other than PO, HU, AP, PW, PR.
FZH	Foreign business entity running a pharmaceutical wholesale.
FZI	Foreign business entity other than classified above.
FZO	Foreign business entity with a status of marketing authorisation holder.
HU	Entity running a pharmaceutical wholesale.
OF	Natural person.
PO	Marketing authorisation holder.
PR	Healthcare entity performing its activity as individual professional practice or group practice of physicians, dentists, nurses and midwives.
PW	An entity conducting healthcare activity other than PR.

Types of place of business of the other party. The other party = the entity with which the transaction is concluded.

Symbol	Description
MPDAP	A pharmacy with an identifier in the Pharmacy Register.
MPDHU	A pharmaceutical wholesaler with an identifier in the Register of Pharmaceutical Wholesales.
MPDPL	Healthcare facility of the medicinal entity with an identifier (REGON 14-character) in the Register of Entities Performing Medicinal Activity.

Connections between other party entities and their places of business

Type of other party entity	idBiznesowyPodm DrugaStrona	Type of reporting entity	IdMPDPodm DrugaStrona IdBiznesowy	IdMPDPodmDrugaStrona RodzajMPD PodmiotuRaportujacego
Marketing authorization holder, importer, producer	NIP	PO	Is not filled	Is not filled
Medical entity, transaction with a hospital pharmacy	REGON	PW	Pharmacy ID	MPDAP
Medical entity, transaction with a medical facility	REGON	PW	REGON14	MPDPL
Generally accessible pharmacy	REGON	AP	Pharmacy ID	MPDAP
Pharmaceutical wholesaler	REGON	HU	Wholesaler ID	MPDHU
Foreign entity	VATIN	FZO, FZH lub FZI	Is not filled	Is not filled
Medical practice	REGON	PR	Is not filled	Is not filled
Another polish entity	REGON	FP	Is not filled	Is not filled

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

Types of transactions in the trade and stock message.

| Symbol	Description	Document requires specification of the other party to trade: - yes - no (in-house document)	Transaction category
ZKU	ZKU Purchase	yes	Purchase
SPR	SPR Sales	yes	Sale
PKU	PKU Warehouse reception	yes	Warehouse Reception
WPR	WPR Warehouse release	yes	Warehouse Release
WZR	WZR Return to supplier	yes	Warehouse Release
PZR	PZR Acceptance of return from the recipient	yes	Warehouse Reception
MWG	MGW Recall in the CPI decision	no	Availability status change
WWG	WWG Return to the supplier (withdrawal GIF)	yes	Warehouse Release
PWY	PWY Acceptance of return from recipient (withdrawal GIF)	yes	Warehouse Reception
PM+	PM+ Warehouse transfer within the assets of business entity – to increase in stock.	yes	Warehouse Reception
WM-	WM- Warehouse transfer within the assets of business entity – to decrease in stock.	yes	Warehouse Release
PZO	PZO Batch release	no	Warehouse Reception
WUT	WUT Disposal due to expiry date	no	Warehouse Release
WUI	WUI Disposal for other reason than expiry date.	no	Warehouse Release
WRO	WRO Internal spending for hospital ward	no	Warehouse Release
PRO	PRO Acceptance of a return from the hospital ward	no	Warehouse Reception

Symbol	Description	Document requires specification of the other party to trade: - yes - no (in-house document)	Transaction category
WRW	WRW Other internal spending	no	Warehouse Release
MWO	MWO Suspension in trade	no	Availability status change
MDO	MDO Authorised to the market	no	Availability status change
IBO	IBO Opening balance	no	Opening Balance
IR+	IR+ Stock difference – to increase in stock. The IR+ transaction is replaced by the INW transaction.	no	Inventory
IR-	IR- Stock difference – to decrease in stock. The IR- transaction is replaced by the INW transaction.	no	Inventory
INW	INW Inventory – to increase or decrease the stock level. The INW transaction replaces the IR+ and IR- transactions.	no	Inventory
STN	STN availability	No	Stock status

* Usage of STN transactions is described in chapter 10

3. Messaging model

The diagram below presents the Messaging model between the IT system of the reporting entity and the ZSMOPL system.

Messaging model is of universal nature – applies to all types of messages passed from the IT systems of the reporting entities to the ZSMOPL.

- The IT system calls the ZSMOPL message passing service. In the case of errors at the stage of service call, the IT system of the reporting entity obtains an error report.
- The first stage of message validation is checking compliance with the passed message with the XML Schema. In the case of any identified non-compliance with the format, the entire message is rejected – no message items are analysed (CeZ shall publish the XML Schema used at this stage of validation to enable the software vendors checking the compliance of generated messages by their own). When the message structure error is detected, the entire message is rejected (no message items are analysed) and the IT system of the reporting entity obtains a structure error report. If the message structure is valid, the ZSMOPL service bus generates the message ID, saves the message in the queue and sends back information containing the message reception confirmation and generated message ID to the IT system of the reporting entity.
- Messages stored in the message queue are processed asynchronously as scheduled. Processing consists in validation of message for compliance with the validity rules. Logical description of rules is entered in this document below, respectively for the message type. The check results in confirmed validity or identified invalidity in the form of error or warning.
- The status of the message sent to ZSMOPL and a possible list of errors can be checked in two ways:
  - after logging into the ZSMOPL portal - by using the "Komunikaty" ("Messages")tile. The results of checking the messages are made available for reporting entities on the ZSMOPL

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

Portal. Portal users, representatives of reporting entities can review the correctness results with accuracy to entire messages and individual transactions as part of messages and positions within the transaction. If an error is found in the message item (in a single transaction), the entire message is treated as erroneous. Verification results are given in quantitative form (number of transactions in the message, number of errors, number of transactions with warnings) and descriptive in the form of a list of errors and warnings. The condition for correctly displaying the error list on the ZSMOPL Portal is signing the message with a valid certificate imported to ZSMOPL on the account of the reporting entity.

- by using a dedicated service - sending a status check message, the structure of which is described in chapter 5.1.4. Delivery planning message - it is used to check the status of verification of a previously sent trade and stock message, missing or planned delivery. The message is sent using the method <zapytajOStatusKomunikatu>. A detailed description of the implementation can be found in the chapters: 4. WebService operation call and 8. Message status. The condition for a correct answer is to sign the message with a valid certificate imported to ZSMOPL on the account of the reporting entity.

- The MPD inventory in ZSMOPL can be checked by using a dedicated service - sending a status check message, the structure of which is described in chapter 5.1.5. Status check message - is used to check the current inventory status of a given reporting unit. The message is sent using the <zapytajOStanyMagazynowe> method. A detailed description of the implementation is in the chapters: 4. WebService operation call and 9. Stock inquiry. The condition of correct answer is signing the message with a valid certificate imported into ZSMOPL on the reporting entity's account.

4. WebService operation call

The ZSMOPL production environment is available at:

https://zsmopl.ezdrowie.gov.pl

Adres WebService: https://zsmopl.ezdrowie.gov.pl/cxf/zsmopl/ws/

WSDL: https://zsmopl.ezdrowie.gov.pl/cxf/zsmopl/ws/?wsdl

XSD: https://zsmopl.ezdrowie.gov.pl/cxf/zsmopl/ws/?xsd=../mt/mt.xsd

The integration (evaluation) environment of ZSMOPL is available at:

http://ewa-zsmopl.ezdrowie.gov.pl/

Adres WebService: https://ewa-zsmopl.ezdrowie.gov.pl/cxf/zsmopl/ws/

WSDL: https://ewa-zsmopl.ezdrowie.gov.pl/cxf/zsmopl/ws/?wsdl

XSD: https://ewa-zsmopl.ezdrowie.gov.pl/cxf/zsmopl/ws/?xsd=../mt/mt.xsd

According to the messaging model described in the "Messaging model" chapter above, the reporting entities should connect with ZSMOPL to send messages. A message contains the transaction datasets i.e. it consists in one or more transactions. Messages can be divided by types:

- Trade and stock message (**OS**) – it is used to collect data on wholesale and retail trade in monitored products. The message is send using the zapiszKomunikatOS method. To this end, insert the XML element <zapiszKomunikatOS> in the body of the message to be sent. The message structure must comply with the scheme described in the "Trade and stock message" chapter.
  After the message is sent, we receive a reply in a form of a Soap document i.e. a header and content. The content includes <zapiszKomunikatOSResponse> containing an important element <identyfikatorKomunikatu> and sent message ID value in the ZSMOPL system. <identyfikatorKomunikatu> is of IdentyfikatorKomunikatuMT type, description of which is entered further in the "Message structure" chapter.
- Shortage report message (**ZB**) – it is used to collect data on shortages of medicinal products on the market. The message is sent using the zapiszKomunikatZB method. To this end, insert the XML element <zapiszKomunikatZB> in the body of the message to be sent. The message structure must comply with the scheme described in the "Shortage report message" chapter.
  After the message is sent, we receive a reply in a form of a Soap document i.e. a header and content. The content includes <zapiszKomunikatZBResponse> containing an important element <identyfikatorKomunikatu> and sent message ID value in the ZSMOPL system. <identyfikatorKomunikatu> is of IdentyfikatorKomunikatuMT type, description of which is entered further in the "Message structure" chapter.
- Delivery planning message (**PD**) – it is used to collect data on delivery schedule. The message is sent using the zapiszKomunikatZB method. To this end, insert the XML element <zapiszKomunikatPD> in the body of the message to be sent. The message structure must comply with the scheme described in the "Delivery planning message" chapter.
  After the message is sent, we receive a reply in a form of a Soap document i.e. a header and content. The content includes <zapiszKomunikatPDResponse> zawierający istotny element

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

<identyfikatorKomunikatu> containing an important element <identyfikatorKomunikatu> and sent message ID value in the ZSMOPL system. <identyfikatorKomunikatu> is of IdentyfikatorKomunikatuMT type, description of which is entered further in the "Message structure" chapter.

- Status check message (getStatus) - it is used to check the status of verification of previously sent trade and stock message, reporting shortages or planning deliveries. The message is sent using the method zapytajOStatusKomunikatu. To do this, put an XML element <zapytajOStatusKomunikatu> in the body of the message being sent. The message structure must comply with the diagram described in the section "Status check message". After sending the message, we get a reply in the form of a Soap document, ie the headline with the content. The content contains <statusOdpowiedz> containing the elements: <identyfikatorKomunikatu>, <statusKomunikatu> and <blad>, whose elements are described in chapters 6.2, 6.3, 6.4 and 6.5.

- Check status message (getStan) - used to check the current stock level of a given reporting unit. The message is sent using the < zapytajOStanyMagazynowe> method. To do this, place the XML element <zapytajOStanyMagazynowe> in the body of the message being sent. The structure of the message must comply with the diagram described in the "Status check message" chapter. After sending the message, we get a reply in the form of a Soap document, i.e. the header with the content. The content includes <stanyMagazynoweOdpowiedz> containing the elements: <statusZapytania>, <liczbaPozostalychZapytan> and <stan> for each EAN code and serial number.

Please note that each message type has its individual structure.

Any sent document includes a parent marker <soapenv:Envelope> containing the <soapenv:Header> marker and the <soapenv:Body> marker required in the sent document.

<soapenv:Header> marker contains information on the envelope security measures (authentication, message summary). Find more in the „Message header specification" section.

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

5. Message structure

Entries in the „Format / Type" column shall mean as follows:

Date	Date saved in the format: YYYY-MM-DD
Ddate + time	Date and time saved in the format: YYYY-MM-DDTHH:MM:SS:MS (where T is a character separating date and time). UTC+01:00 time zone is default in a 24-hour system.
Number, (m,n)	A number containing maximally m digits, including n digits in the fraction part separated with a dot.
To n characters	The value of an element should be an inscription containing between 1 and n characters,
Character string	Any character string (maximally to 255 characters).
IdentyfikatorMPDPodmiotuMT	Data type described in chapter 5.1 "**Błąd! Nie można odnaleźć źródła odwołania.**"
IdentyfikatorKomunikatuMT	Data type described in chapter 5.1 "**Błąd! Nie można odnaleźć źródła odwołania.**".
IdentyfikatorPodmiotuRaportujacegoMT	Data type described in chapter 5.1 "**Błąd! Nie można odnaleźć źródła odwołania.**" chapter.

Character coding in compliance with UTF-8.

5.1. Description of helper types/class

NOTE: detailed information about the data scheme, including field length, data type, maturity / multiplicity is in the current XSD.

Type	Simple element	Multiplicity	Format	Description
IdentyfikatorKomunikatuMT				Message identifier.
	id	1	Number (18,0)	Message identifier.
IdentyfikatorMPDPodmiotuMT				ID of the place of business of the reporting entity.
	idBiznesowy	1	Character string	Business ID of the place of business of the reporting entity – from the domain specified in the element rodzajMPDPodmiotuRaportujacego: if rodzajMPDPodmiotuRaportujacego == 'MPDHU', ID from the Register of Wholesales. if rodzajMPDPodmiotuRaportujacego == 'MPDAP', ID from the Register of Pharmacies. White characters are not accepted in this element.
	rodzajMPDPodmiotuRaportujacego	1	To 5 characters	Type of place of business of the reporting entity: MPDHU – pharmaceutical wholesale holding the ID in the Register of Pharmaceutical Wholesales.

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

Type	Simple element	Multiplicity	Format	Description
				MPDAP – pharmacy holding the ID in the Register of Pharmacies.
IdentyfikatorMPDPodmiotuDrugaStronaMT				ID of the place of business of the reporting entity.
	idBiznesowy	0-1	Character string	Business ID of the place of business of the reporting entity – from the domain specified in the element rodzajMPDPodmiotuRaportujacegoDrugaStrona: if rodzajMPDPodmiotuRaportujacegoDrugaStrona == 'MPDHU', ID from the Register of Wholesales. if rodzajMPDPodmiotuRaportujacegoDrugaStrona == 'MPDAP' ID from the Register of Pharmacies. If rodzajMPDPodmiotuRaportujacegoDrugaStrona == 'MPDPL', ID of healthcare institution of the healthcare entity from the Register of Healthcare Entities – 14-digit REGON. Other entities (ie in the following types: PO, PR, FP, FZH, FZI, FZO, OF) - not applicable. White characters are not accepted in this element.
	rodzajMPDPodmiotuRaportujacegoDrugaStrona	0-1	To 5 characters	Type of place of business of the reporting entity: MPDHU – pharmaceutical wholesale holding the ID in the Register of Pharmaceutical Wholesales. MPDAP – pharmacy holding the ID in the Register of Pharmacies. MPDPL – healthcare institution of the healthcare entity holding the ID (14-digit REGON) in the Register of Healthcare Entities in the Healthcare Entities resources.
IdentyfikatorPodmiotuRaportujacegoMT				ID of the reporting entity.
	idBiznesowy	1	Character string	Business ID of the place of business of the reporting entity – from the domain specified in the element rodzajPodmiotuRaportujacego: if rodzajPodmiotuRaportujacego == 'PO', tax identification number (NIP), VATIN or tax identification number in the state, in which the entity is registered, preceded by the symbol of the country compliant with 2-character ISO_3166-1 code entered at the stage of entity's registration.

Type	Simple element	Multiplicity	Format	Description
				if rodzajPodmiotuRaportujacego from the {'PA', 'PF'} set and initially {PW} , ID is 12-digit number of the register book from the Register of Healtcare Entities. if rodzajPodmiotuRaportujacego from the {'HU', 'AP'} set, ID is (9-digit) REGON entered at the stage of entity's registration. In the case of applications for creating an account (rodzajWniosku=='KONTO') idBiznesowy is established when the application obtains the status=='ZAAKCEPTOWANY' (APPROVED) (for lower statuses idBiznesowy is not estblished). White characters are not accepted in this element.
	rodzajPodmiotuRaportujacego	1	To 2 characters	Type of reporting entity. Values according to the glossary of types of entities reporting the trade in monitored products: PO, HU, AP, PA, PF, PW (Chapter 2. Glossary of terms)

5.1.1. Trade and stock message

* note: in exceptional cases it is a complex type element, in such cases a description of the type can be found in chapter 5.1

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
0	komunikatOS				Trade and stock message.
		dataKomunikatu	0-1	Data	The marker declaring the date of the message is the declaration of the reporter, for which day the specific message is sent.
		idPodmiotuRaportujacego	1	IdentyfikatorPodmiotuRaportujacegoMT	ID of the reporting entity. According to chapter 5.1 Description of helper types/class.
		idMPDPodmiotuRaportujacego	0-1	IdentyfikatorMPDPodmiotuMT	ID of place of business of the reporting entity. It does not exist in the case of reporting entity == PO. According to chapter 5.1 Description of helper types/class.
		idKomunikatPierwotny	0-1	IdentyfikatorKomunikatuMT	ID of the message to which the actual message refers. The element applies to the situation where the current message withdraws and replaces the previous message. According to

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
					chapter 5.1 Description of helper types/class.
1	komunikatTransakcja		1-n	Organized chronologically by dataCzasTransakcji	Trade and stock transaction.
		lp	1	Number (7,0)	Ordinal number of transaction in the message. The maximum value of 2 million. The numbers must be unique.
		dataCzasTransakcji	1	Date + time	Date and time of transaction – with accuracy to milliseconds (It is recommended that subsequent transactions in the message differ in the time of the transaction so that the time determines the order of transactions). The date cannot refer to the future.
		rodzajTransakcji	1	To 3 characters	Type of trade and stock transaction. Values according to the dictionary of trade and stock transaction types (Chapter 2. Glossary of terms).
		rodzajPodmDrugaStrona	0-1	To 3 characters	Type of entity, with which the transaction of trade in medicinal products is made. The Glossary of types of entities with which the transaction of trade in medicinal products is made (Chapter 2. Glossary of terms): Not applicable for transactions, in which entering the other party (table: Types of transactions in the trade and stock message in the „Glossary of terms" chapter 2) is not required.
		idBiznesowyPodmDrugaStrona	0-1	Character string	ID of the entity, with which the transaction is made. The following values are expected: For the entities registered in Poland (i.e. of Polish HU, AP, PW, PR, FP type) – 9-digit REGON (National Official Register of Business Entities No.) or NIP (Tax Identification Number). For marketing authorisation holder (i.e. of PO type) – VAT ID (NIP) or VATIN.

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
					For entities other than domestic undertaking (i.e. of FZH, FZO, FZI type), tax identification number in the state of its registration. In the case of lack of such number, any other ID (i.e. ID from the local files of the contractor in the IT system of the reporting entity). For natural person (i.e. of OF type) – not entered. White characters are not accepted in this element.
		krajPodmDrugaStrona	0-1	To 2 characters	State of entity, with which the transaction is made – country code compliant with https://stat.gov.pl/badania-statystyczne/sprawozdawczosc/intrastat/alfabetyczny-wykaz-krajow/. Required for foreign undertakings (rodzajPodmDrugaStrona: FZH, FZO, FZI).
		nazwaPodmDrugaStrona	0-1	Character string	Name of entity, with which the transaction is made: . is not (does not need to be) entered for the entities running wholesales, pharmacies, healthcare entities (i.e. of HU, AP, PW type) – name of the entity will be acquired from a register in the ZSMOPL applicable for the type of entity at the message validation stage. must be entered in the case of marketing authorisation holder (PO), Polish entities other than entities carrying out medical activities, pharmacies, wholesalers, and for foreign enterprises (FZH, FZO, FZI). Not applicable to natural person (rodzajPodmDrugaStrona==OF).
		adresPodmDrugaStrona	0-1	Character string	Address of entity, with which the transaction is made: is not (does not need to be) entered for the entities running wholesales, pharmacies, healthcare entities (i.e. of HU, AP, PW type) – address data of the entity will be acquired from a register in the ZSMOPL applicable for the type of entity at the message validation stage. must be entered in the case of marketing authorisation holder (PO),

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
					Polish entities other than entities carrying out medical activities, pharmacies, wholesalers, and for foreign enterprises (FZH, FZO, FZI). Not applicable to natural person (rodzajPodmDrugaStrona==OF).
		idMPDPodmDrugaStrona	0-1	Identyfikat orMPDPod miotuDrug aStronaMT	ID of the place of business of the entity, with which the transaction is made. According to chapter 5.1 Description of helper types/class.
		nrDokSprzZakRefDokMag	0-n	Character string	Number of sales/purchase document relevant to the warehouse document – number required for documents of warehouse document types, only for the following (rodzajTransakcji): PKU, WPR. For PKU transaction, this should be the number of the external sales invoice – number of document assigned by the invoice issuer (from which the goods are purchased). For WPR document, this should be the number of own (in-house) sales invoice. Due to the relation between the warehouse receipt/release document and purchase/sales document of „one to one" type e.g. one warehouse receipt document can apply to several purchase documents, the element is a list of values (multiplicity: 0-n).
		czyTransakcjaJestKorekta	1	Number (1,0)	Specifies, whether the document is a correction: 1 – document is a correction 0 – document is not a correction.
		dataDokKorygowanego	0-1	Date + time	Date and time of corrected document – with accuracy to milliseconds – required only, when the transaction is a correction (if czyTransakcjaJestKorekta==1). The date cannot refer to the future. The date of the corrected document must be prior than the date of the correction document (given in the element <dataCzasTransakcji>).
		nrDokKorygowanego	0-1	Character string	Number of corrected document – required only, when the transaction is

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
					a correction (if czyTransakcjaJestKorekta==1).
		przyczynaRoznicyInwentaryzacyjnej	0-1	Character string	Reason of stock difference – description field required, when the transaction is Stock difference i.e. rodzajTransakcji: IR+, IR-, INW.
		rodzajDokZrodlSprz	0-1	To 2 characters	Element not required, maintained only for compatibility with the previous version of the system.
		nrDokZrodl	1	Character string	Number of source transaction document – number of invoice or warehouse document, receipt, number of any other document assigned by the reporting entity. In the case of STN transactions, this field should be filled in with the value ND (not applicable)
		nrDokZewnetrznego	0-1	Character string	Number of external document (number of document assigned by the issuer) – required for revenue transactions (ZKU).
		nrERecepty	0	Character string	Element not required, maintained only for compatibility with the previous version of the system.
		podstawaWydaniaLeku	0-1	To 2 characters	Dictionary Basics of drug release: RP – prescription, ZA – requisition, ZL – order, ND – not applicable.
2	komunikatTransakcjaOSPoz		1-n	Ordered by lp	Transactions and trade positions. Class of item of document being the trade and stock transaction. One object KomunikatTransakcja is correlated to – one or more items (corresponding to the items from the source transaction document).
		lp	1	Number (8,0)	Ordinal number of the document item. It is recommended that document positions be ordered by the lp element.. The numbers must be unique.

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
		nrPozycjiDokZrodl	1	Number (8,0)	Number of item according to the order from the source document, corresponding to the ordinal number of the item in the source document. Ordinal numbers are not supposed to be continuous, due to the fact that not all items in the source document need to be monitored.
		czyProduktWydanyZRefundacja	0	Number (1,0)	Element not required, maintained only for compatibility with the previous version of the system.
		czyDotImportuDocellnterw	1	Number (1,0)	Marker specifying, whether the transaction item applies to direct or intervention import: 0 – does not apply to direct or intervention import 1 – applies to to direct or intervention import.
		numerZgodyPrezesa	0-1	Character string	The approval number of the President of the URPL - it is filled in for medicines that have been exempted from the obligation to include certain detailed information in Polish on the packaging and in the package leaflet. The number appears in the form of a character string according to a designated scheme: UR/Z/legal basis of the approval/sequential number/two-digit year - for example: UR/Z/4c/1/22.
		kodEAN	0-1	Character string	Medicinal product code 14 characters (EAN, GTIN) or foreign GTIN • Completed if the transaction concerns a product registered in RPL or a product with the Consent of the President of URPL • Not completed if the transaction concerns target or intervention import During the message ingestion stage, all GTIN (EAN) codes are converted to 14-characters if they are shorter. This element does not accept whitespace.
		nrZapotrzImportuDocellnterw	0-1	Character string	Number of requisition for drugs from direct or intervention import – filled in when the transaction applies to direct

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
					or intervention import (if czyDotImportuDocelInterw==1). Exemplary number formats are entered below: MZ/NNNNN/RR – for requisition D/NNNNN/RR – for dietary food DOP/NNNNN/RR – for consents issued in the Pharmaceutical Law Act, Article 4(8) Zgoda/NNNNN/RR – for decisions issued in the Pharmaceutical Law Act, Article 4(9) where NNNNN means 5-digit subsequent number and RR means two last digits of the year – for decisions issued to the end of the year 2020 ZGODA/NNNNN/RR – for decisions issued in the Pharmaceutical Law Act, Article 4(9) where NNNNN means 5-digit subsequent number and RR means two last digits of the year - for decisions issued since the beginning of the year 2021 White characters are not accepted in this element.
		seria	0-1	Character string	Series of the medicinal product. Value required for all transactions except IR-, INW in case this transaction sets all 4 stock levels to 0: • <stanIloscDostepnySeries> • <stanIloscWstrzWycofSeria> • <stanIloscAvailable> • <stanIloscWstrzWycof> This means that if at least one of the above states is different from zero 0, the <series> element is required. Value also required for target and intervention imports.
		dataWaznosciSerii	0-1	Date	Expiry date of the batch of the medicinal product. Value required for all transactions except INW, IR- or IR+ and STN, which is associated with INW, IR- or IR+

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
					transactions, where the value in all of the following attributes: • <stanIloscDostepnySeries> • <stanIloscWstrzWycofSeria> • <stanIloscAvailable> • <stanIloscWstrzWycof> is equal to 0. The expiry date of the series cannot exceed a period of 10 years in relation to the transaction date for the series. Value also required for target and intervention imports.
		ilosc	0-1	Number (18,5)	Quantity of medicinal product – should be entered, when the transaction is not a correction (czyTransakcjaJestKorekta==0). Expected value greater than 0, not applicable for IBO, IR+, IR-, INW, for which you can indicate 0. For STN transactions, this item is not required Due to possible sales in the quantity being not an integer, e.g. sales of a single blister from packaging, the accuracy of numeric field was set for 5 decimal places.
		wartosc	0-1	Number (18,5)	Net value of sold unit packages of a medicinal product – without consideration of discounts, rebates and allowances. It should be entered, when the transaction is not a correction (czyTransakcjaJestKorekta==0). Required for transactions == SPR. Expected value greater than or equal to 0. Value == 0 means donation.
		iloscPrzedKorekta	0-1	Number (18,5)	Quantity of sold packages of medicinal product before correction – should be entered, when the transaction is a correction (czyTransakcjaJestKorekta==1). Expected value greater than or equal to 0.
		iloscPoKorekcie	0-1	Number (18,5)	Quantity of medicinal product after correction – should be entered, when the transaction is a correction

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
					(czyTransakcjaJestKorekta==1). The expected value greater or equal to 0.
		wartoscPrzedKorekta	0-1	Number (18,5)	Net value of medicinal product - without consideration of discounts, rebates and allowances. It should be entered, when the transaction is a correction (czyTransakcjaJestKorekta==1). Expected value greater than or equal to 0. Required for transactions == SPR..
		wartoscPoKorekcie	0-1	Number (18,5)	Net value of sold packages of medicinal product - without consideration of discounts, rebates and allowances. It should be entered, when the transaction is a correction (czyTransakcjaJestKorekta==1). Expected value greater than or equal to 0. Required for transactions == SPR.
		przyczynaKorekty	0-1	Character string	Reason for correction – description field. Information required, when the transaction is a correction (czyTransakcjaJestKorekta==1).
3	komunikatTransakcjaOSPozZapMT		0-1		Positions of trade and stocks transactions for target and intervention imports. Summary of product characteristics for medicinal products from direct and intervention import – the object should exist, when the transaction item concerns direct or intervention import. i.e. komunikatTransakcjaOSPoz.czyDotImportuDocelInterw==1). Summary of product characteristics consists in the following fields: commercial code (EAN or equivalent), commercial name, international name, pharmaceutical form, dose, packaging size, name of marketing authorisation holder (MAH) , country of origin.
		kodEAN	1	Character string	The foreign medicinal product code. EAN code or equivalent. Not verified. In the absence of a code, enter "none".

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
					White characters are not accepted in this element.
		nazwaHandlowa	1	Character string	Commercial name.
		nazwaMiedzynarodowa	1	Character string	International name.
		Postac	1	Character string	Form.
		Dawka	1	Character string	Dose.
		wielkoscOpakowania	1	Character string	Packaging size.
		Producent	1	Character string	Name of marketing authorisation holder (MAH).
		krajPochodzenia	1	Character string	Country of origin of medicinal product – country code compliant with https://stat.gov.pl/badania-statystyczne/sprawozdawczosc/intrastat/alfabetyczny-wykaz-krajow/.
4	komunikatTransakcjaOSPozStanMT		0-1		Revenue and stock transaction - information on stock. Stock information – the object should exist, if the transaction (komunikatTransakcja.rodzajTransakcji) is STN, oris in one of the following types: PKU, WPR, WZR, PZR, MWG, WWG, PWY, PM+, WM-, PZO, WUT, WUI, WRO, WRW, MWO, MDO, IBO, IR+, IR- and the STN transaction was not sent in the message.
		stanIloscDostepnySeria	1	Number (18,5)	Quantity of medicinal product in stock in the warehouse of the place of business (after transaction) - stock available for trade for medicinal product batch. Authorised limit for HU and PO not more than 200 000. Authorised limit for AP not more than 10 000.
		stanWartoscDostepnySeria	0	Number (18,5)	Element not required, maintained only for compatibility with the previous version of the system.
		stanIloscWstrzWycofSeria	1	Number (18,5)	Quantity of medicinal product in stock in the warehouse of the place of business (after transaction) - stock suspended or recalled for trade for medicinal product batch.

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
					Authorised limit for HU and PO not more than 200 000. Authorised limit for AP not more than 10 000.

		stanWartoscDostepny	0	Number (18,5)	Element not required, maintained only for compatibility with the previous version of the system.
		stanIloscWstrzWycof	1	Number (18,5)	Quantity of medicinal product in stock in the warehouse of the place of business (after transaction) - stock suspended or recalled for trade for all batches of medicinal product in total.
		stanWartoscWstrzWycof	0	Number (18,5)	Element not required, maintained only for compatibility with the previous version of the system.

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

5.1.2. Shortage report message

Hierarchy level	Element	Attribute	Multiplicity	Format / Type	Description
0	komunikatZB				Shortage report message.
		idPodmiotuRaportujacego	1	IdentyfikatorPodmiotuRaportujacegoMT	ID of the reporting entity. According to chapter 5.1 Description of helper types/class.
		idMPDPodmiotuRaportujacego	1	IdentyfikatorMPDPodmiotuMT	ID of place of business of the reporting entity. According to chapter 5.1 Description of helper types/class.
		idKomunikatPierwotny	0-1	IdentyfikatorKomunikatuMT	ID of the message to which the actual message refers. The element applies to the situation, in which the actual message is a corrected or a new version of the previously sent message. According to chapter 5.1 Description of helper types/class.
1	komunikatTransakcja		1-n	Ordered by dataCzasTransakcji	Transaction of report of shortage of medicinal product.
		lp	1	Number (8,0)	Ordinal number of transaction in the message. The numbers must be unique.
		dataCzasTransakcji	1	Date + time	Date and time of transaction (shortage reports) - with accuracy to milliseconds (subsequent transactions in the message should have different transaction time to make the time the indicator of transactions' order).
		liczbaBraku	1	Number (8,0)	Number of packaging of medicinal product reported as missing (of shortage).
		przyczynaBraku	0-1	Character string	Cause of the product lack.
		kodEAN	1	Character string	EAN code of medicinal product. White characters are not accepted in this element.

5.1.3. Delivery planning message

* note: in exceptional cases it is a complex type element, in such cases a description of the type can be found in chapter 5.1

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
0	komunikatPD				Delivery planning message.
		idPodmiotuRaportujacego	1	IdentyfikatorPodmiotuRaportujacegoMT	ID of the reporting entity.
		idKomunikatPierwotny	0-1	IdentyfikatorKomunikatuMT	ID of the message to which the actual message refers. The element applies to the situation, in which the actual message is a corrected or a new version of the previously sent message.
1	komunikatTransakcja		1-n	Ordered by dataCzasTransakcji	Transaction of planning the deliveries of medicinal product.
		lp	1	Number (8,0)	Ordinal number of transaction in the message. The numbers must be unique.
		dataCzasTransakcji	1	Date + time	Date and time of transaction (plan reporting) - with accuracy to milliseconds (subsequent transactions in the message should have different transaction time to make the time the indicator of transactions' order).
		kodEAN	1	Character string	EAN code of medicinal product to which the delivery planning transaction applies. White characters are not accepted in this element.
		rodzajTransakcji	1	To 2 characters	Type of delivery planning transaction:: PL – delivery plan, WS – suspension of deliveries, WZ – resumption of deliveries, ZA – end of deliveries. Reporting WS, WZ and ZA transactions is currently not required and should not be sent.
		dataPoczatkowa	1	Date	Starting date of the period to which the planning process applies.

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
					At the message validation stage, it is checked whether the condition of entering of the future date in relation to the date of reporting the plan (later or equal to the Data(dataCzasTransakcji)) is met. It is recommended that the date: dataPoczatkowa is the next day after the date: dataCzasTransakcji. When the transaction type is the "delivery plan" (rodzajTransakcji==PL) the date specifies the beginning of the period, to which the detailed plan entered in the komunikatTransakcjaPDPlan refers.
		dataKoncowa	0-1	Date	End date – end date of the period, to which the planning process applies: When the transaction type is the "delivery plan" (rodzajTransakcji==PL), the date is required. Delivery plans are required for periods of at least 1 month.
		uzasadnWstrzymZakoncz	0-1	Character string	Element not required, maintained only for compatibility with the previous version of the system.
2	komunikatTransakcjaPDPlan		0-1	Ordered by year, month	The medicinal products planning delivery transaction - detailed data Contains detailed data of delivery plan in the delivery planning message. Applies to the transactions, for which komunikatTransakcja.rodzajTransakcji== PL (delivery plan). Objects ordered by criterion {year, week}.
		wielkosc	1	Number (8,0)	Delivery volume – planned number of unit packaging of medicinal product in delivery.
		rok	1	Number (4,0)	Year of planned delivery. Entered year should fall within the period specified by the starting and end date (komunikatTransakcja.dataPoczatkowa and dataKoncowa).
		miesiac	1	Number (2,0)	Number of month in the year of planned delivery. The month number is a two-digit number of the month from 01 to 12, with the leading . (komunikatTransakcja.dataPoczatkowa and dataKoncowa).

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

Hierarchy level	Complex Element	Simple Element	Multiplicity	Format / Type	Description
		miejsceDostawy	1	komunikatTransakcjaPDPlanMiejsceDostawy	Place of planned delivery
3	komunikatTransakcjaPDPlanMiejsceDostawy				Place of planned delivery in Planned delivery
		rodzajMiejscaDostawy	1	2 znaki	Type of planned delivery. Acceptable values: • HU • AP • PL
		idMiejscaDostawy	1	Ciąg znaków	• 'MPDHU' = ID from the Register of Wholesales. • 'MPDAP' = ID from the Register of Pharmacies. • 'MPDPL' = ID of healthcare institution of the healthcare entity from the Register of Healthcare Entities – 9-digit REGON.

5.1.4. Status check message

* note: in exceptional cases it is a complex type element, in such cases a description of the type can be found in chapter 5.1

Level in Hierarchy	Complex Element	Simple Element	Multi plicit y	Format/ Type	Description
0	Message				Status Check Message
		identyfikatorKomu niaktu	1	Number (18,0)	System-generated Message ID when one of the messages is sent: Trades and stocks Deficiency reports Delivery planning

6. Message validation rules

The "Messaging model" chapter presents the messaging model, whereas clause 3 of this chapter contains a conceptual description of the method of message validation. The general scheme is universal for all types of messages. There are however certain differences resulting from the structure of individual messages. The table below presents detailed validation schemes for the individual types of messages.

Trade and stock message (OS)

Validation order		Rule domain code
1	Message header validation OS	KM
2	Verification of transaction data OS	TROS
3	Verification of position data within a transaction OS	TROSPOZ

Shortage report message (ZB)

Validation order		Rule domain code
1	Message header validation ZB	KM
2	Verification of transaction data ZB	TRZB

Delivery planning message (PD)

Validation order		Rule domain code
1	Message header validation PD	KM
2	Verification of transaction data PD	TRPD
3	Verification of position data within a transaction PD	TRPDPLAN

6.1. Message validation for compliance with template

During validation the message is checked for compliance with the scheme (XML Schema). If any non-compliance is identified, a reply with code 500 containing information on non-compliance with scheme is sent the IT system of the reporting entity. Such message is rejected in full and not recorded in the ZSMOPL (and therefore unavailable on website).

Exemplary errors causing reply with error 500 by the Web Service and discontinuation of further validation:

- Invalid symbol of transaction type.
- Invalid specification of the type of entity, with which the transaction is made.
- No date and time of transaction.
- Value of element, which should specify, whether the transaction is a correction, is not an integer.
- Value of marker, which specifies, whether the medicinal product was dispensed with reimbursement, is not an integer.
- Value of marker, which specifies, whether the transaction item concerns direct or intervention import, is not an integer.
- Invalid specification of the type of source document of sales transaction.
- Invalid specification of the basis for drug dispensing.
- Invalid type of delivery planning transaction.
- Incomplete number of product shortage.
- Negative values / quantities are given.
- White marks have been given.

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

Exemplary Web Service replies to such errors:

- <faultstring>Unmarshalling Error: cvc-enumeration-valid: Value 'AAA' is not facet-valid with respect to enumeration '[ZKU, SPR, PKU, WPR, WZR, PZR, MWG, WWG, PWY, PM+, WM-, PZO, WUT, WUI, WRO, WRW, MWO, MDO, IBO, IR+, IR-]'. It must be a value from the enumeration.</faultstring>
- <faultstring>Unmarshalling Error: cvc-enumeration-valid: Value 'AAA' is not facet-valid with respect to enumeration '[PO, HU, AP, PA, PF, PW]'. It must be a value from the enumeration. .</faultstring>
- <faultstring>Unmarshalling Error: Not a number: A</faultstring>
- <faultstring>Unmarshalling Error: cvc-datatype-valid.1.2.1: '2018-02-26' is not a valid value for 'dateTime'.</faultstring>

If at this stage validation is negative, it is recommended to check the message to be sent for compliance with the scheme.

If validation is positive (validation for compliance with XML Schema), the message has the assigned ID and is saved in ZSMOPL (awaiting validation described in chapter 3, clause 3).

6.2. Message header validation

Rule domain code	Verification status	Description of error or warning
KM1	Error	The message was signed with a certificate not registered in ZSMOPL. Please log in to the ZSMOPL Portal and check whether your certificate has expired or if it is the same certificate that you have imported into the ZSMOPL report dispatch software.
KM2	Error	There was a mismatch between the elements: reporting entity identifier, type of reporting entity, identifier of the reporting entity's place of business, type of reporting entity's place of business.
KM3	Error	The original message with the identifier indicated was not found or belongs to another reporting entity.
KM4	Error	Message is a duplicate.
KM5	Error	The message sent contains duplicates in the transaction numbering.
KM6	Error	Future date of the message.
KM7	Error	The deadline of 7 days for correcting the message has been exceeded.
KM8	Warning	The original message has incorrect status or withdrawn.

Rule domain code	Verification status	Description of error or warning	
KM9	Error	The STN transaction must be the last transaction in the message and can only occur once	

6.3. Validation of transactions in the trade and stock message

Rule domain code	Verification status	Description of error or warning	Message element / Other comments
TROS2	Warning	The given REGON of the medicinal entity was not found in the register of entities performing medicinal activity.	<idBiznesowyPodmDrugaStrona>
TROS4	Error	The given REGON number has an incorrect construction. Rule domain code	Verification status	Description of error or warning	Message element / Other comments
			<stanIloscWstrzWycof> < dataWaznosciSerii > not required for INW, IR –, IR+ transactions, where the value in all the following attributes: • <stanIloscDostepnySeries> • <stanIloscWstrzWycofSeria> • <stanIloscAvailable> • <stanIloscWstrzWycof> is equal to 0
TROSPOZ76	Error	The available state of the series must not be greater than the available state of the product.	<stanIloscDostepnySeria> is greater than<stanIloscDostepny>
TROSPOZ77	Error	Series paused state can not be greater than the state of paused product.	<stanIloscWstrzWycofSeria> is greater than <stanIloscWstrzWycof>
TROSPOZ78	Error	An incorrect expiration date of the batch has been entered, or the product is expired. You can find details on how to correctly report an expired product on the website https://ezdrowie.gov.pl/portal/home/systemy-it/zintegrowany-system-monitorowania-obrotu-produktami-leczniczymi/	If the batch expiration date has passed, the system will return TROSPOZ78 for the following transactions: (ZKU, SPR, PKU, WPR, MWG, WWG, PWY, PZO, WUI, WRO, WRW, MDO). For the following transactions (WZR, PZR, PM+, WM-, WUT, PRO, MWO, IBO, IR+, IR-, INW), no error will be returned if the value of <stanIloscDostepnySeria> = 0. The status for products with expired batches can only be reported as <stanIloscWstrzWycofSeria>. The expiration date of the batch <dataWaznosciSerii> is verified against <dataCzasTransakcji> or <dataDokKorygowanego>, depending on whether the transaction is a correction or not: When <czyTransakcjaJestKorekta> = 0, <dataCzasTransakcji> is checked.

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

Rule domain code	Verification status	Description of error or warning	Message element / Other comments
			When <czyTransakcjaJestKorekta> = 1, <dataDokKorygowanego> is checked.
			The system allows sending an STN transaction with inventory statuses for expired products, depending on whether the product was imported as a special import or not. If <czyDotImportuDocelInterw> = 0:
			The EAN, batch number, and batch expiration date provided in the STN transaction must also appear in the main transaction (WZR, PZR, PM+, WM-, WUT, PRO, MWO, IBO, IR+, IR-, or INW).
			The value in the STN transaction <stanIloscDostepnySeria> = 0.
			If <czyDotImportuDocelInterw> = 1:
			The demand number, batch number, and batch expiration date provided in the STN transaction must also appear in the main transaction (WZR, PZR, PM+, WM-, WUT, PRO, MWO, IBO, IR+, IR-, or INW).
			The value in the STN transaction <stanIloscDostepnySeria> = 0.
TROSPOZ79	Warning	The number of demand is older than 2 years.	<nrZapotrzImportuDocelInterw>
TROSPOZ80	Warning	The state of the product series exceeding the permitted limit is given.	<stanIloscDostepnySeria> <stanIloscWstrzWycofSeria> Authorised limit for HU and PO not more than 200 000. Authorised limit for AP not more than 10 000.
TROSPOZ81	Warning	The expiry date of the authorization is more than 3 years.	Based on the data contained in the Register of Medicinal Products.
TROSPOZ82	Warning	The GTIN code given belongs to the veterinary not reporting to the ZSMOPL.	Based on the data contained in the Register of Medicinal Products.

Rule domain code	Verification status	Description of error or warning	Message element / Other comments
TROSPOZ83	Error	No information about stock levels was provided in the STN transaction. Check whether the following data: EAN code or special import request number, as well as the batch number and batch expiration date, are the same in the STN transaction and the main transaction.	The <batch> field, which was present in previous transactions, was not provided in the STN transaction. The verification of data in the STN transaction against the main transaction depends on whether the product comes from a special import: If <czyDotImportuDocelInterw> = 0, the system checks whether the set of data: EAN, batch number, and batch expiration date in the main transaction matches the STN transaction. If not, it returns the error TROSPOZ83. If <czyDotImportuDocelInterw> = 1, the system checks whether the set of data: special import request number, batch number, and batch expiration date in the main transaction matches the STN transaction. If not, it returns the error TROSPOZ83.
TROSPOZ84	Warning	The transaction item contains information about the stock levels, which was not required when using the STN transaction	If there is an STN transaction in the message, the element <komunikatTransakcjaOSPozStanMT> should not be used for the remaining transactions
TROSPOZ85	Error	Incorrect stock levels were provided in the STN transaction. Check whether the following data: EAN code or special import request number, as well as the batch number and batch expiration date, are the same in the STN transaction and the main transaction.	In the STN transaction items, an entry with <batch> appeared that was not present in any previous transaction. The verification of data in the STN transaction against the main transaction depends on whether the product comes from a special import: If <czyDotImportuDocelInterw> = 0, the system checks whether the set of data: EAN, batch number, and batch expiration date in the main transaction matches the STN transaction. If not, it returns the error TROSPOZ85. If <czyDotImportuDocelInterw> = 1, the system checks whether the set of

TRPDPLAN14	Error	The type of the planned place of delivery is different than a wholesaler, pharmacy or the healthcare facility	<rodzajMiejscaDostawy>
TRPDPLAN15	Error	The given identifier of the pharmaceutical wholesaler, indicated as the planned place of delivery, was not found in the Register of Pharmaceutical Wholesalers	<idMiejscaDostawy>
TRPDPLAN16	Error	The given pharmacy identifier, indicated as the intended place of delivery, was not found in the Pharmacy Register	<idMiejscaDostawy>
TRPDPLAN17	Error	The provided REGON (9 characters) of the healthcare entity, indicated as the planned place of delivery, was not found in the Register of Entities Performing Medicinal Activities	<idMiejscaDostawy>
TRPDPLAN18	Warning	The pharmacy indicated as the place of the planned delivery in the Register of Pharmacies does not have the active or pending status	<idMiejscaDostawy>
TRPDPLAN19	Warning	The wholesaler indicated as the place of the planned delivery in the Register of Pharmaceutical Wholesalers does not have the active or pending status	<idMiejscaDostawy>
TRPDPLAN20	Warning	The healthcare entity indicated as the place of the planned delivery in the the Register of Entities Performing Medicinal Activities does not have an active status	<idMiejscaDostawy>
TRPDPLAN21	Error	Do not provide a place of delivery for deliveries	<miejsceDostawy>
TRPDPLAN22	Error	The scheduled delivery date is incorrect. It is not possible to schedule a delivery for a month that has already started or for months that have already ended	<rok> <miesiac>

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

7. Message header specification

Application of the reporting entities should send messages with signature and certificate used for signature. This information should be contained in the message header (<soapenv:Header>). The header should include the "wsse:Security" element to ensure security in the SOAP protocol. This element should have defined namespaces by adding of the following elements:

- xmlns:wsse="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-secext-1.0.xsd"
- xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"

The "wsse:Security" element consists in the following elements:

- wsse:BinarySecurityToken element – containing the certificate chain with public key
  - Define the element: EncodingType="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-soap-message-security-1.0#Base64Binary"
  - Define the element: ValueType="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-x509-token-profile-1.0#X509PKIPathv1"
  - Define the element wsu:Id with unique element ID
- ds:Signature element – contains e-signature of the <soapenv:Body>section content
  - Define the namespace element: xmlns:ds="http://www.w3.org/2000/09/xmldsig#"
  - ds:SignedInfo element
    - ds:CanonicalizationMethod element
      - Define the element: Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#"
    - element ds:SignatureMethod
      - Define the element: Algorithm="http://www.w3.org/2000/09/xmldsig#rsa-sha1"
    - ds:Reference element
      - Define the URI element, value of which is the reference for the oapenv:Body element (URI values should be identical to the value of wsu:ld attribute preceded with hash #)
      - Define the element: ds:Transforms
        - Define the element: ds:Transform
          - Define the element: Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#"
      - Define the element: ds:DigestMethod
        - Define the element: Algorithm="http://www.w3.org/2000/09/xmldsig#sha1"
      - Define the element: ds:DigestValue
  - ds:SignatureValue element with signature value
  - ds:KeyInfo element
    - wsse:SecurityTokenReference element
      - wsse:Reference element

‒ Define the URI element as a reference i.e. with the value identical as the value of wsu:Id of the wsse:BinarySecurityToken element preceded with hash.

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

8. Message status

You can check the verification status of previously sent messages in two ways. The first way is to use the portal, where in the "Komunikaty" section using a filter, you can search for the message we are interested in.

The second method is to use a dedicated service for this purpose, by sending a message, the structure of which is described in chapter 5.1.4.

WebService address and WSDL in a production environment:

WebService address: https://zsmopl.ezdrowie.gov.pl/cxf/statuskomunikatudmz/

WSDL: https://zsmopl.ezdrowie.gov.pl/cxf/statuskomunikatudmz?wsdl

WebService address and WSDL in the integration (evaluation) environment:

WebService address: https://ewa-zsmopl.ezdrowie.gov.pl/cxf/statuskomunikatudmz/

WSDL: https://ewa-zsmopl.ezdrowie.gov.pl/cxf/statuskomunikatudmz?wsdl

8.1.   Example of a service call

zapytajOStatusKomunikatu – question about the status of the ID message =155204078562714774

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:stat="http://cez.gov.pl/zsmopl/ws/statuskomunikatudmz/">
<soapenv:Header/>
 <soapenv:Body>
  <stat:zapytajOStatusKomunikatu>
    <komunikat>
       <identyfikatorKomunikatu>155204078562714774</identyfikatorKomunikatu>
    </komunikat>
  </stat:zapytajOStatusKomunikatu>
 </soapenv:Body>
</soapenv:Envelope>
```

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

8.2. Examples of correct answers

Example of service response in case the message sent to ZSMOPL has the status „Poprawny":

```
  <soap:Body wsu:Id="id-9BC23361F05BAF38B2155204079601511424" xmlns:wsu="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
    <ns2:statusOdpowiedz xmlns:ns2="http://cez.gov.pl/zsmopl/ws/statuskomunikatudmz/">
      <statusKomunikatu>
        <identyfikatorKomunikatu>155204078562714774</identyfikatorKomunikatu>
        <statusKomunikatu>Poprawny</statusKomunikatu>
      </statusKomunikatu>
    </ns2:statusOdpowiedz>
  </soap:Body>
</soap:Envelope>
```

Example of service response in case the message sent to ZSMOPL has the status „Poprawny z ostrzeżeniem":

```
  <soap:Body wsu:Id="id-9BC23361F05BAF38B2155204137777611479" xmlns:wsu="http://docs.oasis-

  </soap:Body>
</soap:Envelope>
```

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

8.3. GetStatus error messages

Example of service response if the request is signed with a certificate not registered in ZSMOPL:

```
 </soap:Header>
  <soap:Body wsu:Id="id-d7497e2c-a946-43fe-a50b-e4b093f3a428" xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
    <ns2:statusOdpowiedz xmlns:ns2="http://cez.gov.pl/zsmopl/ws/statuskomunikatudmz/">
     <statusKomunikatu>
      <identyfikatorKomunikatu>156198234009905662</identyfikatorKomunikatu>
      <statusKomunikatu>Brak autoryzacji: Certyfikat nie został zarejestrowany</statusKomunikatu>
     </statusKomunikatu>
    </ns2:statusOdpowiedz>
  </soap:Body>
</soap:Envelope>
```

An example of a service response if the question relates to a non-existing message number or a message from another entity:

```
 </soap:Header>
  <soap:Body wsu:Id="id-d7497e2c-a946-43fe-a50b-e4b093f3a428" xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
    <ns2:statusOdpowiedz xmlns:ns2="http://cez.gov.pl/zsmopl/ws/statuskomunikatudmz/">
     <statusKomunikatu>
      <identyfikatorKomunikatu>156198234009905662</identyfikatorKomunikatu>
      <statusKomunikatu>Identyfikator komunikatu jest niepoprawny, nie istnieje lub oczekuje na przetworzenie</statusKomunikatu>
     </statusKomunikatu>
    </ns2:statusOdpowiedz>
  </soap:Body>
</soap:Envelope>
```

Example of service response in case of internal ZSMOPL error:

```
 </soap:Header>
  <soap:Body wsu:Id="id-d7497e2c-a946-43fe-a50b-e4b093f3a428" xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
    <ns2:statusOdpowiedz xmlns:ns2="http://cez.gov.pl/zsmopl/ws/statuskomunikatudmz/">
     <statusKomunikatu>

      <statusKomunikatu>Wystąpił błąd połączenia z serwerem wewnętrznym. Proszę spróbować ponownie później</statusKomunikatu>
     </statusKomunikatu>
    </ns2:statusOdpowiedz>
```

```
  </soap:Body>
</soap:Envelope>
```

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

9. Stock inquiry

A request for warehouse status enables verification of warehouse statuses sent earlier by means of turnover and state messages (OS). The service is available through Webservice. The request must be confirmed with a current certificate of the entity.

WebService address and WSDL in a production environment:

WebService address: https://zsmopl.ezdrowie.gov.pl/cxf/stanydmz

WSDL: https://zsmopl.ezdrowie.gov.pl/cxf/stanydmzz?wsdl

WebService address and WSDL in the integration (evaluation) environment:

WebService address: https://ewa-zsmopl.ezdrowie.gov.pl/cxf/stanydmz

WSDL: https://ewa-zsmopl.ezdrowie.gov.pl/cxf/stanydmz?wsdl

The number of queries is limited in time, and depends on the environment, i.e. other parameters are set on the production environment and others on the evaluation environment. Information about current settings is available on the CeZ website, in the KOMUNIKATY tab.

9.1.   Example of a service call

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:stan="http://cez.gov.pl/zsmopl/ws/stanydmz/">
  <soapenv:Header/>
  <soapenv:Body>

9.2. Service call and response examples with correct parameters

Example of response, when call parameters are correct and MPD has warehouse states:

```
<soap:Body wsu:Id="id-dd72490a-2539-4dde-99d2-36350acaf6f1" xmlns:wsu="http://docs.oasis-
open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
  <ns2:stanyMagazynoweOdpowiedz xmlns:ns2="http://cez.gov.pl/zsmopl/ws/stanydmz/">
    <stanyMagazynowe>
      <statusZapytania>Zapytanie poprawne</statusZapytania>
      <liczbaPozostalychZapytan>1</liczbaPozostalychZapytan>
      <stan>
        <ean>05909990651535</ean>
        <numerSerii>Seria2</numerSerii>
        <stanIloscDostepny>63298.0000</stanIloscDostepny>
        <stanIloscDostepnySeria>11489.00000</stanIloscDostepnySeria>
        <stanIloscWstrzWycof>0.0000</stanIloscWstrzWycof>
        <stanIloscWstrzWycofSeria>0.0000</stanIloscWstrzWycofSeria>
        <dataCzasTransakcji>2019-09-17T00:00:00.000+02:00</dataCzasTransakcji>
      </stan>
      <stan>
        <ean>05909990651535</ean>
        <numerSerii>Seria1</numerSerii>
```

```
        <stanIloscDostepny>7984368671.0000</stanIloscDostepny>
        <stanIloscDostepnySeria>2.00000</stanIloscDostepnySeria>
        <stanIloscWstrzWycof>0.0000</stanIloscWstrzWycof>
        <stanIloscWstrzWycofSeria>0.0000</stanIloscWstrzWycofSeria>
        <dataCzasTransakcji>2019-08-01T11:00:10.000+02:00</dataCzasTransakcji>
      </stan>
    </stanyMagazynowe>
  </ns2:stanyMagazynoweOdpowiedz>
</soap:Body>
```

Note: The current product status is given in the item <stanIloscDostepny> in the section with the latest <dataCzasTransakcji>, in this example, it is the date =2019-09-17T00:00:00.000+02:00.

The states of the <stanIloscDostepnySeria> series are valid every time.

Similarly for suspended states.

Example of response when call parameters are correct and MPD is not in stock:

```
<soap:Body wsu:Id="id-251de460-c405-4bb8-8363-6098607cc899" xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
  <ns2:stanyMagazynoweOdpowiedz xmlns:ns2="http://cez.gov.pl/zsmopl/ws/stanydmz/">
    <stanyMagazynowe>
      <statusZapytania>Nie znaleziono stanów magazynowych</statusZapytania>
      <liczbaPozostalychZapytan>5</liczbaPozostalychZapytan>
    </stanyMagazynowe>
  </ns2:stanyMagazynoweOdpowiedz>
</soap:Body>
```

Example of response when call parameters are correct but query limit has been exceeded.

```
<soap:Body wsu:Id="id-bc8186cc-f8c7-4d19-abd8-0350e0918619" xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
  <ns2:stanyMagazynoweOdpowiedz xmlns:ns2="http://cez.gov.pl/zsmopl/ws/stanydmz/">
    <stanyMagazynowe>
      <statusZapytania>Przekroczono limit zapytan. Następne zapytanie możliwe: 2019-10-17 11:42:41.985</statusZapytania>
    </stanyMagazynowe>
  </ns2:stanyMagazynoweOdpowiedz>
</soap:Body>
```

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers

9.3. Service getStan error messages

Answer when the call parameters are incorrect:

```
<soap:Body wsu:Id="id-f843a509-f101-4fbf-8aee-3674ee830784" xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
   <ns2:stanyMagazynoweOdpowiedz xmlns:ns2="http://cez.gov.pl/zsmopl/ws/stanydmz/">
     <stanyMagazynowe>
       <statusZapytania>Wystąpiła niezgodność pomiędzy elementami: identyfikator podmiotu raportującego, rodzaj podmiotu raportującego, identyfikator miejsca prowadzenia działalności podmiotu raportującego, rodzaj miejsca prowadzenia działalności podmiotu raportującego</statusZapytania>
     </stanyMagazynowe>
   </ns2:stanyMagazynoweOdpowiedz>
 </soap:Body>
```

Answer when the question was signed with a certificate not registered in ZSMOPL:

```
<soap:Body wsu:Id="id-7523d8ec-0751-40e2-a3b3-d52eb8b71a1d" xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
   <ns2:stanyMagazynoweOdpowiedz xmlns:ns2="http://cez.gov.pl/zsmopl/ws/stanydmz/">
     <stanyMagazynowe>
       <statusZapytania>Brak autoryzacji: Certyfikat nie został zarejestrowany</statusZapytania>
     </stanyMagazynowe>
   </ns2:stanyMagazynoweOdpowiedz>
 </soap:Body>
```

Example of service response in case of internal ZSMOPL error:

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
   <soap:Fault>
     <faultcode>soap:Server</faultcode>
     <faultstring>Wystąpił błąd wewnętrzny systemu, proszę spróbować ponownie później.</faultstring>
     <detail>
       <bladDostepnosci xmlns="http://cez.gov.pl/zsmopl/ws/stanydmz/"/>
     </detail>
   </soap:Fault>
 </soap:Body>
</soap:Envelope>
```

10. STN transaction

The STN transaction is a specific transaction that facilitates the reporting of an entity's inventory. By using the STN transaction, we have the option of summarizing the stock levels of all products that we have traded during the day at the end of the day, instead of providing these stocks each time with each transaction changing the stock level. As a result, the amount of data sent to ZSMOPL is reduced, and inventory reporting becomes easier.

If you want to report stock levels using STN transactions, you must define one STN transaction in the message, and provide items in it for all product series that appeared in previous transactions.

If you want to use inventory reporting with the use of STN transactions, you should remember a few rules:

- There can be only one STN transaction. If we want to use it, it must appear as the last in the sent message, i.e. have the highest lp number from all transactions in the message, and there must be no subsequent transaction in the message. Otherwise, the KM9 error "STN transaction must be the last transaction in the message" will be reported
- All products and their series that appeared in the sent message must appear in the STN transaction. If an item in the STN transaction with status information is not created for a product series that occurred in any of the previous transactions, the error TROSPOZ83 - "No information about stock levels in the STN transaction was reported"
- When using the STN transaction, the stock levels should be entered in it and only in it. If the STN transaction appears in the message, while specifying the stock levels in previous transactions, the warning TROSPOZ84 will be reported - "The transaction item contains information about stock levels that was not required using the STN transaction". At the same time, the occurrence of the STN transaction in the message means that the TROSPOZ44 error is not reported for the transaction item, which means that there is no information about stock levels.
  The TROSPOZ44 error can be reported if a transaction item with no statuses is entered in the STN transaction itself.
- In the STN transaction, only the stock levels of these products and their series, which occurred in the previous transactions, should be given. If you specify a status in the STN transaction for a product series that did not occur in previous transactions, the warning TROSPOZ85 will be reported - "Product inventory levels have been entered and it does not appear in any transaction"

The User's Guide ZSMOPL – Specification of messages for the purpose of software developers
